**Subject:** Sirenusa Condo Methyl Bromide Release 3/24/15 Update

;

### **3/25/15 Update on Sirenusa Condo Methyl Bromide Release, Cruz Bay, St. John**

Today crews received shipments of sample media and additional sampling equipment, prepared sampling equipment and developed the sampling plan for tomorrow's sampling event. OSCs coordinated with DPNR, VIFD, VIPD and condo complex management, in order to develop the sampling strategy and approach. Preliminary un-validated data from Tuesday's sampling event is expected to be received on 3/27. OSCs also conducted interviews with the PRP in effort to gain information on any additional locations where methyl bromide may have been utilized in the past.

Tomorrow crews will conduct additional air sampling, air monitoring, and collect wipe samples in Unit J upper, where the impacted family had stayed. Crews will begin air sampling, air monitoring, chemical-specific draeger tube monitoring, and wipe sampling in Unit J lower (the unit that underwent the fumigation and is suspected to be the source of the methyl bromide).

R2 REOC remains the point of contact for all EPA's activities related to this incident.

Personnel on-site today included 2 OSCs, 1 ERT, 4 CID, 2 RST contractors, 2 SERAS contractors.

Additional parties on-site include: DPNR, St. John Fire Department, St. John PD, and Terminex representatives.
